

WHAT IS A BOLLARD ?

A bollard is a short, consistent diameter post with a domed top, placed as a barrier to prevent vehicle access to sidewalks and recreation areas while allowing free movement of people, bikes and animals.

WHY CHOOSE OUR BOLLARDS ?

Our dome-topped bollards are made here in WA from CCA treated, local plantation pine. PERMApole bollards are not only good value, they will stand the test of time.

OPTIONAL REBATES

For a small additional cost, bollards are available with a rebate designed to accommodate reflective tape to improve visibility.

WHY CCA TIMBER ?

CCA Timber is the most hard wearing, sustainably grown and safe permanent fencing option available in Western Australia today.

Impervious to white ants, CCA Timber performs better in fire situations than many new synthetic materials and is a renewable resource, sustainably grown in the WA South West.

WHAT DOES H4 MEAN ?

H4 is the Hazard Level required for timber that will be used outside and come into contact with the ground eg. buried posts. Timber reaches the H4 level of protection by being submerged in the CCA preservative solution at high pressure, for longer than timbers designed for indoor use.

H4 Timber is able to withstand severe wetting, borers and termites and be used as fence posts, pergola posts (in-ground) and landscaping timbers.

CAN I BUY DIRECTLY FROM PERMAPOLE ?

No you can't. We have a network of approved retailers who stock the PERMApole range. To find one near you, visit www.permapole.com.au

Bollards are made to order - allow 4 weeks for delivery.

Product Size/ Diameter	Length/Height
